

Can our ATM systems cope?

Integration of commercial space operations into the existing ATM system

EUROCONTROL

March 2015

European Organisation

+

National Regulatory Authorities

Air Navigation Service Providers

A starting point

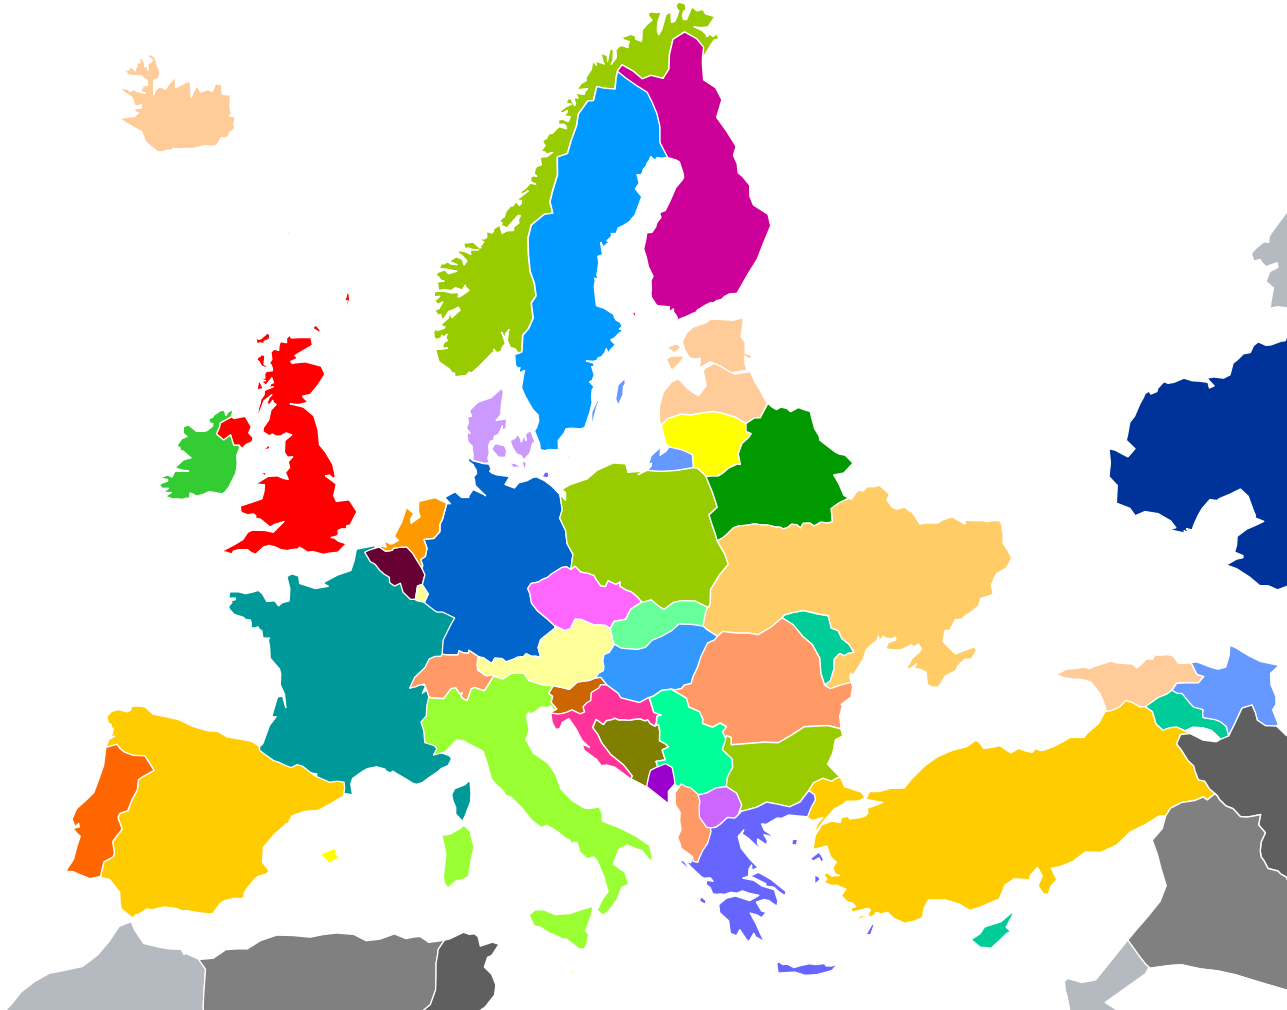

ICAO: The contracting States recognise that every State has complete and exclusive sovereignty over the airspace above its territory.

But.....

Where does airspace end??

Fragmentation

Comparison with USA

IMPORTANT DIFFERENCE

USA

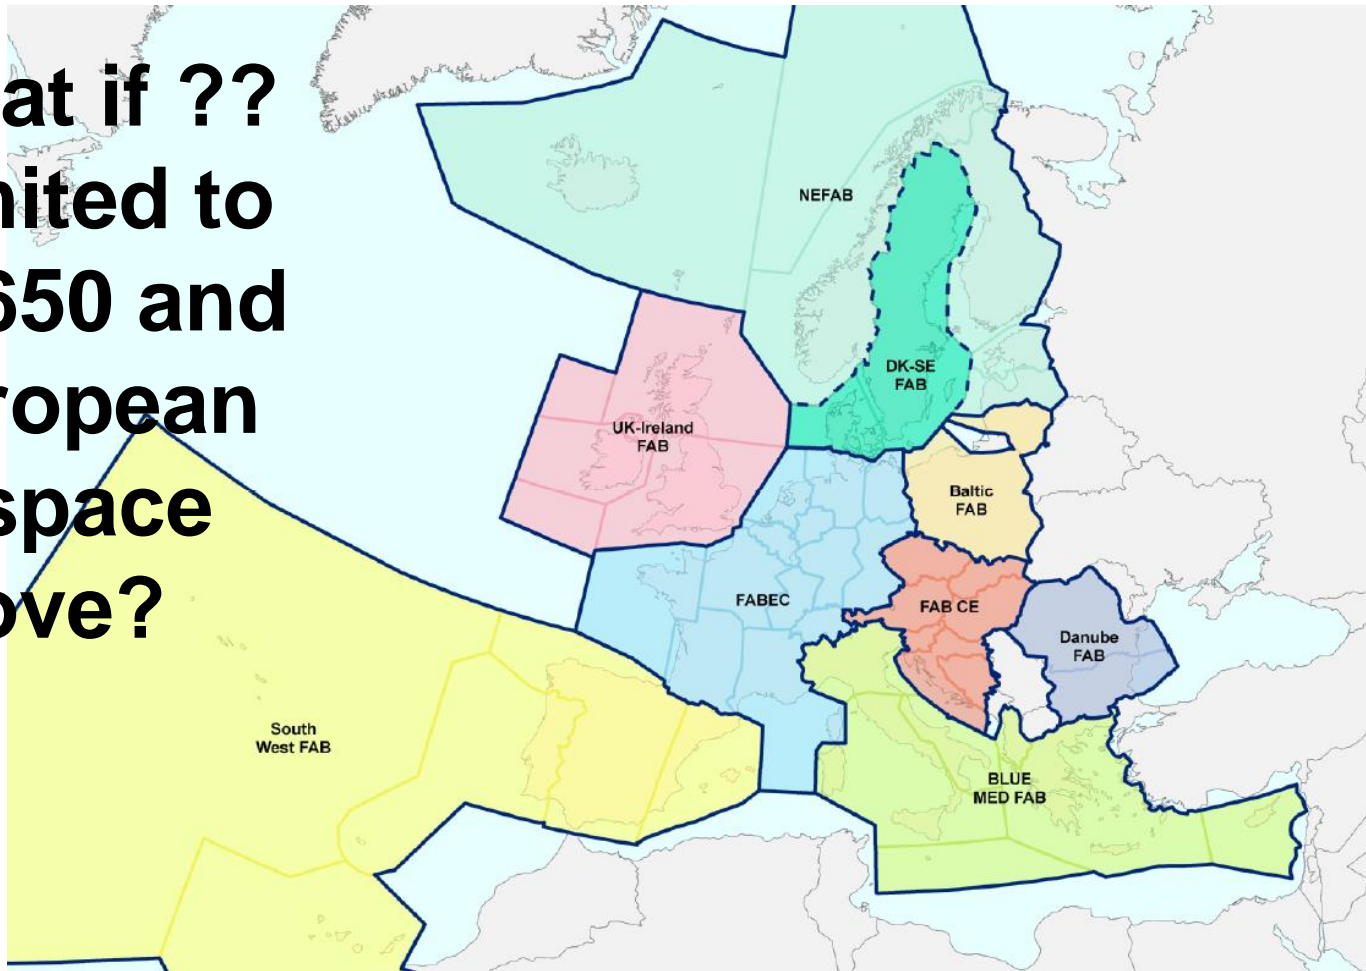

1 Service Provider
1 Regulator
+/- 22 ACCs

EUROPE

41 States
EASA + national
regulators
+/- 63 ACCs

Defragmentation – FABs

**What if ??
Limited to
FL650 and
European
airspace
above?**

Equitable Access to Airspace

- Predictable and equitable access to airspace for commercial operations.
- Segregated operations require a volume of airspace to be sterilized to accommodate activity.
- Sterile airspace disrupts civil aviation traffic flows causing increased economic and environmental costs.

Target Levels of Safety

- In aviation, the acceptable level of safety is generally defined in terms of the probability of an aircraft accident occurring.
- Commercial space operations Target Levels of Safety.
- Need to ensure existing levels of safety for other airspace users is not compromised.

Columbia debris trail

ATM Technical Systems

- **Communications**
- **Navigation**
- **Surveillance**

- Requires minimum aircraft equipage standards
- Can the existing systems cope
- What technical upgrades are needed

ATC Operating Procedures

- Conventional radar control.
- Existing separation standards.
- Instrument Flight Rule requirements.
- **Can they be applied to aerospace operations?**

A Possible Solution?

Past

Procedural Control

the current and planned a/c positions

Today

Radar Control

Know the current and **estimate** planned a/c positions

Future

Trajectory Management

Know & share the current & planned a/c positions
